### **3. Project Delivery Approach**

We approach all projects from a project lifecycle perspective, with most projects following a series of interdependent stages. Typically, these stages include Initiation, Planning and Design, Execution, Monitoring and Controlling and Closing.

We utilize a wide range of leading IP cameras to provide full coverage for your location. We survey your site and provide you with several options to meet your surveillance needs. Your site will be equipped with the latest in high definition digital recording.

Recognizing there are no "one size fits all" solutions, we tailor each project to suit our clients' individual needs and unique operating environments. Since all our products and services are aligned with the lifecycle stages, we offer the right support, at the right time, focused on the right goals.

### **4. Services**

We offer our clients the latest technology, high quality, reliable & cost-effective hardware and software solutions to meet their requirements.

RADIX's wide scope of business integrates ease, functionality and technology into effective, environmentally friendly business solutions that provide optimum output for both private and corporate consumers. Services range from consultation to management and include:

#### **Process Automation**

RADIX's Process Automation involves using computer technology and software engineering to help diverse industries operate more efficiently and safely.

We believe that process automation is not limited to industries alone as its applications are wide and varied. Areas such as street light management and waste recycling management can also benefit from process automation.

#### **Building Management**

RADIX's Building Management System (BMS) is a computer-based control system installed in buildings that controls and monitors the building's

mechanical and electrical equipment such as ventilation, lighting, power systems, fire systems, and security systems. RADIX provides both consulting and implementation of various building management systems which benefit owners, tenants and maintenance companies.

## Home Automation

RADIX offers a unique home automation service which uses one or more computers to control basic home functions and features automatically and sometimes remotely.

Home automation increases quality of life and can include the scheduling and automatic operation of water sprinklers, heating and air conditioning, window coverings, security systems, lighting, and food preparation appliances. Home automation may also allow vital home functions to be controlled remotely from anywhere in the world using a computer connected to the internet, anything from an answering machine to a vacuum cleaner.

## Technology Consulting

RADIX is dedicated to steadily providing our valued customers with the most innovative and technologically advanced methods of operation. We are constantly seeking new and modern ways to help enhance your business. Technology consulting is the process of providing professional technology advice to a business or organization. It may entail suggesting and implementing certain software or hardware solutions into the business or organization in order to streamline certain processes by increasing efficiency and cutting costs. As the world becomes increasingly reliant on technology, technology consulting can benefit virtually any industry, including those considered "low-tech."

At RADIX, we take on the role of "Solutions Architect" with our experience on multiple hardware and software environments and complex heterogeneous systems environments. We have the ability to share and communicate ideas both verbally and in writing to executive staff, business sponsors, and technical resources in a clear, concise language that is the parlance of each group.

RADIX possesses the hands-on experience in multiple industries and across several disciplines, including mainframes, distributed platforms, desktops, and mobile devices.

## Security Solutions

RADIX provides the latest in automated and remote-controlled CCTVs, motion detectors, door alarms, and security systems for homes, offices and buildings, complexes that are connected to the police and/or security agencies.

Other security systems offered by RADIX are sirens and flashers, heat and gas detectors, pool gate guards, advanced defense and tracking management in order to help ensure your safety.

## Managed Services

This is the last leg in the delivery of solutions. The managed services offered by RADIX are centered around the proactive performance management of technology (IT, telephony, applications, etc.) assets on behalf of a customer on a subscription basis. Managed services let you offload specific IT operations to a service provider, known in tech parlance as a Managed Services Provider. The managed service provider assumes ongoing responsibility for monitoring, managing and/or problem resolution for selected IT systems and functions on your behalf.

## Advanced Cyber Securities

RADIX protect its customer from facing complex and persistent challenges in securing their Assets; whether it is the network system or sensitive information. We help them secure their precious business data and communication networks from internal and external threats. Our data and network security planning services help enterprises to find existing and possible data leakage scenarios and to effectively control and eliminate them. Whatever the customers' enterprise industry or networking requirement is, RADIX can help them in implementing the best IT security strategies.

## 5. Other Services

We have a dedicated team of highly skilled IT Executives who are passionate about cutting edge technology. RADIX also assist their clients for the following requirements:

- Logistic Automation

- PABX and IP Telephony Systems
- CCTV & Access Control Systems
- PA and BGM Systems
- LAN, WAN & Wireless
- Firewall, Antivirus & VPN Solutions
- Support Contracts
- Web Security
- Website & App Development

We have developed strong partnerships with major international **security and automation** equipment suppliers in order to bring to the market the most advanced and competitively priced products along with professional back up services.

All-inclusive maintenance contracts & emergency call out facilities are available to suite customer needs. Our Quality Management System combined with customer's feedback; ensure that the best & most effective solutions are always available to the Middle East market, backed up with an effective sales & customer support organization.
